PROFESSIONAL SUMMARY

Engineer with 4+ years of experience building and shipping production systems across startups and big tech. Product-minded and customer-centric, with end-to-end ownership across AI/LLMs, backend engineering, and cloud infrastructure. Seeking fast-paced, high-ownership opportunities to build and scale products.

WORK EXPERIENCE

OLIS AI (PRE-SEED STARTUP)

August 2025 - July 2026

Founding Engineer

New York City

- Owned 0→1 development of the AI product, translating the initial product idea into architecture, prototypes, and a production system.
- Built an **agent harness with LangGraph** to orchestrate hybrid RAG and tool integrations for reliable multi-step QA.
- Designed the retrieval stack using **Milvus, Elasticsearch BM25, cross-encoder reranking, and ACL filters**, improving answer relevance and tenant security.
- Built **Azure Service Bus** ingestion workers for Microsoft 365, Google Workspace, Slack, and Teams, keeping customer knowledge continuously synchronized.
- Developed **FastAPI/PostgreSQL** backend services with OAuth and encrypted credentials for secure multi-tenant operation.
- Owned **cloud infrastructure and developer workflows**, deploying Azure Container Apps, GitHub Actions CI/CD, monitoring, and **LangSmith** for agent debugging and evaluation.
- Worked directly with non-technical co-founders to understand product requirements, explain technical tradeoffs, and translate ideas into practical engineering solutions.
- Partnered with **pilot customers** to gather user feedback, identify product gaps, and drive iterations that improved the product.

GRAPHITE.IO

February 2025 - May 2025

Research Extern

Amherst, MA

- Engineered a multi-agent long-form article generator using **LangGraph, RAG**, and STORM-based conversation simulations.
- Designed **planner, writer, and editor modules** with feedback loops using tool calling and retrieval orchestration.
- Devised a custom **LLM-as-a-judge** eval framework, achieving a 70% win rate over GPT-4o and a 5.04-point gain in QA.

GOOGLE

August 2020 - August 2023

Forward Deployed Engineer, Data AI/ML

Bangalore, India

- Joined the **founding cohort of the Google Cloud Solutions** team in India, **owning end-to-end customer implementations** from architecture and PoCs through deployment and production support.
- Designed and troubleshooted scalable data systems using **Dataflow, Apache Beam, Composer, BigQuery, and Vertex AI**, resolving **400+ production issues**.
- Built scalable solutions across **150+ priority enterprise workloads**, improving reliability and production readiness.
- Developed automation to proactively detect at-risk workflows, reducing **SLA misses by 70%** and resolution time by **27%**.
- Built reusable **Python ETL pipelines and developer tooling** for the Dataflow Cookbook, turning recurring production issues into reusable solutions.
- Led **customer implementations for multi-million-dollar GCP clients**, designing Dataflow pipelines and monitoring, preparing guides, and providing peak-sale on-call support; recognized by the **VP of Cloud Customer Experience, India**.

INFOBLOX

January 2020 - June 2020

Software Engineering Intern

Bangalore, India

- Refactored NIOS in C++ by removing legacy implementations, unnecessary dependencies, and non-DNS functionality, reducing startup time by 25% while simplifying the codebase.
- Developed reusable components for core network service management in NIOS web UI using React and Angular.

TECHNICAL SKILLS

Languages:	Python, C++, JavaScript, TypeScript, SQL
Backend & Web:	FastAPI, REST APIs, React, Next.js, PostgreSQL, Redis, MongoDB
AI/ML:	PyTorch, Vertex, LangGraph, Claude Agents SDK, RAG, Agent Harness, Agent Evaluation
Cloud & Infra:	GCP, Azure, AWS, Docker, Kubernetes, GitHub Actions, Git
Data:	Apache Beam, Pub/Sub, Spark, Airflow, Kafka, Elasticsearch, Milvus, Neo4j

EDUCATION

University of Massachusetts | Amherst, MA
Master of Science in Computer Science

September 2023 – May 2025
